Perspectives
1 Unequal gains of function are a headache for migraine mechanisms
Osvaldo D. Uchitel (see vol. 589, p. 5879)

Journal club
5 Understanding the mechanisms of neuromuscular fatigue with paired-pulse stimulation
Hugh M. Penrose and Klinda L. Keller
7 Mu-32 mouse mechanoreceptors are modulated by Ca\textsubscript{v3.2} T-type calcium channel
Rodrigo Bolaños-Jiménez, Óscar Escamilla-Ocañas, Mktor Martínez-Alencar and Gerardo Rivera-Silva

Symposium section reviews: ligand-gated ion channels: from genes to behaviour
9 Ligand-gated ion channels: from genes to behaviour
Derek Bowie
13 Ca\textsuperscript{2+}-permeable AMPA receptors switch affinities: mechanisms and consequences
Syong June Liu and Inessvee Svitkivska
21 Defined criteria for auxiliary subunits of glutamate receptors
Dan Yen and Sasumu Tominaga
33 Synaptic regulation of excitatory synapse maturation
Evan Dier
39 Reactive oxygen species inactivate neuronal nicotinic acetylcholine receptors through a highly conserved cysteine near the intracellular mouth of the channel: implications for diseases that involve oxidative stress
Arjun Krishnaswamy and Ellis Cooper
49 Redefining the classification of AMPA-selective ionotropic glutamate receptors
Derek Bowie
63 Structure and function of glutamate receptor amino terminal domains
Niki Fundowski
73 Modes of glutamate receptor gating
Galitok K. Popescu
93 Thinking in cycles: AMIC is a good model for acetylcholine receptor channels
Anthony Auerbach

Techniques for physiology
99 Chronic imaging of cortical sensory map dynamics using a genetically encoded calcium indicator
Matthie Merzene, Venoco Lu, Laza T. Sumosva, Sebastian Köglert, Frutop Helsens and David J. Margolis

Neuroscience: cellular/molecular
119 Rapid Report: Control of firing patterns through modulation of axon initial segment T-type calcium channels
Kevin J. Bender, Victor H. Uebel, John J. Renger and Laurent A. Trussell
119 The energetic consequences of loop II gating motions in acetylcholine receptor channels
Arcimo Joo, Shweta Gupta, Shoshona N. Zucker and Anthony Auerbach
131 Heterosynaptic long-term potentiation at interneuron–principal neuron synapses in the amygdala requires nitric oxide signalling
M. D. Lange, M. Dong, J. Leisting, H. C. Pope and K. Jiang
145 Modulation of K3.4 channel N-type inactivation by protein kinase C shapes the action potential in dorsal root ganglion neurons
David M. Ritter, Ceyon Ho, Michael E. O’Leary and Manuel Covarrubias
163 Influences on blockade by 1-butylcyclopheosphorothionate of GABA\textsubscript{A} receptors spontaneous gating, agonist activation and desensitization
Nidal A. Othman, Michael Gallery, Tarek Z. Derki, Daniel J. optco-see, David C. Perry and Tim G. Hales
179 Characterization of Trypt1 desensitization in ON bipolar cells and its role in downstream signalling
Tyandler Kaur and Scott Navy

Neuroscience: development/plasticity/repair
193 Postsynaptic BDNF signalling regulates long-term potentiation at thalamo-amygdala afferents
S. Mios, T. Ensers and V. Leouann

Neuroscience: behavioural/systems/cognitive
209 Diet-induced adaptation of奖Heading: function
223 Physiological characterization and functional heterogeneity of narrow-field mammalian amacrine cells
Ji-Hee Park, Fan Gao and Samuel M. Wu
